- New Language Packs 10
Gain a consolidated view of risk and compliance data from across the organization and increase productivity by driving users to the information that they need, as soon as they enter the system.

Make smarter, data-driven decisions by presenting users with visually impactful real-time information.

Enhance collaboration and communication by presenting users with the actions and tasks that are nearing due for completion so that they never miss a due date again.

Present a range of real-time graphs, tables, lists and tasks.

Drill-through into the data driving the segments of your charts to get a closer look at the specific data in question.

Out-of-the-box range of easily customizable widgets with intuitive configuration designed specifically for business users.

Share administrator defined dashboards with groups of users while also giving your users the power to create personalized dashboards to their own requirements.
Providing insight & supporting a single view of risk through Dashboards
ARM 11 features an improved user interface which is more intuitive and offers an all new modern “look and feel”
ARM 11 features an all improved intuitive interface with a modern “look and feel” that has been designed in conjunction with everyday users of the system to ensure that it is both functionally rich and easy to use.

Reduce training requirements with new and improved intuitive designs which help drive take up and widespread engagement in the risk and compliance processes.

Enhance productivity with the user interface (UI) and user experience (UX) design patterns based on ease of use to inspire and engage data entry.

Another reason to replace Excel in favor of ARM for all your risk and compliance needs.

✔ Scroll through elements of your risk process from assessment to mitigation and beyond with increased efficiency.

✔ Productivity improvements through a focus on key tasks and processes.

✔ Faster page load and response times.

✔ Enhanced document management with greater visibility and clarity.

✔ Improved Feedback and Review.

✔ Bring the risk process to life through the Risk Visualizer integrated directly within the risk form.
Streamline your data gathering process through the new Survey Manager which allows you to distribute surveys to internal and external parties alike and then store the results in a centralized system.

- Speed up the process of having to source responses and opinions from different areas by including third parties and vendors in your assessment process.
- Ensure more accurate results by eliminating the element of human error and provide users with an unbiased approach to decision-making based on objective information.
- Evaluate risk maturity throughout your business by utilizing a format the users are familiar with and comfortable using.

- Create structured multi-page surveys with a variety of different question types and answer formats.
- Distribute surveys through Survey Manager to internal and external parties alike.
- Survey results are gathered and stored automatically.
- Consolidate, aggregate and share the results from all the respondents.
- A centralized system for storing all surveys and results.
Ensure more accurate results by eliminating the element of human error and provide users with an unbiased approach to decision-making based on objective information.
ARM 11 now offers support for multi-byte languages such as Russian, Chinese and Arabic to name but a few.
**Enabler Videos**

Updated enabler videos demonstrating all the new areas of the system and reflecting the new user interface designs. These videos are designed to provide quick refreshers to key areas of functionality and supplement internal training tools.

The videos are now shipped with the ARM software as well as being available directly on the customer support portal.

---

**Support for Non-Latin Character Sets**

ARM 11 now offers support for multi-byte (non-Latin) characters. This has extended the product out to users of Cyrillic, Arabic and featural alphabets such as Korean and Chinese, to name but a few.

Reach out to all the different parts of the business and involve them in the risk and compliance management process using languages that they are familiar with.

---

**New Language Packs**

ARM 11 will include language packs for French, Spanish and Korean built into the product which will include translations for standard field labels and messages in localized languages.
